

ASSURE RETROSPECTIVE CASE REVIEW

Mortality review is an invaluable tool to reduce avoidable deaths in hospital and deliver improvements in care.

In the past few years, avoidable deaths have been the focus of a great deal of media attention and National reports. One method of learning from these events is for a team in each hospital to assess the quality of care provided leading up to a patient death. This process is known as a Mortality Review.

In 2015 Clarity designed a system that would automate the methods developed and used by a group of hospitals in the North East of England. Clarity's system went 'live' in August 2016. This system is called Mortality Review.

Clarity's mortality review system is based on our established 'Assure' platform used to deliver our quality improvement service. Our system receive, analyse, aggregate and report on individual patient data from the NHS national patient data repository (SUS) and supplemented with data added locally by participating hospitals. Data is transmitted using https and sFTP secure transmission protocols.

mortalityreview-enquiries@clarity.co.uk

Online solution accessible anywhere

Designed to meet your policy and process needs

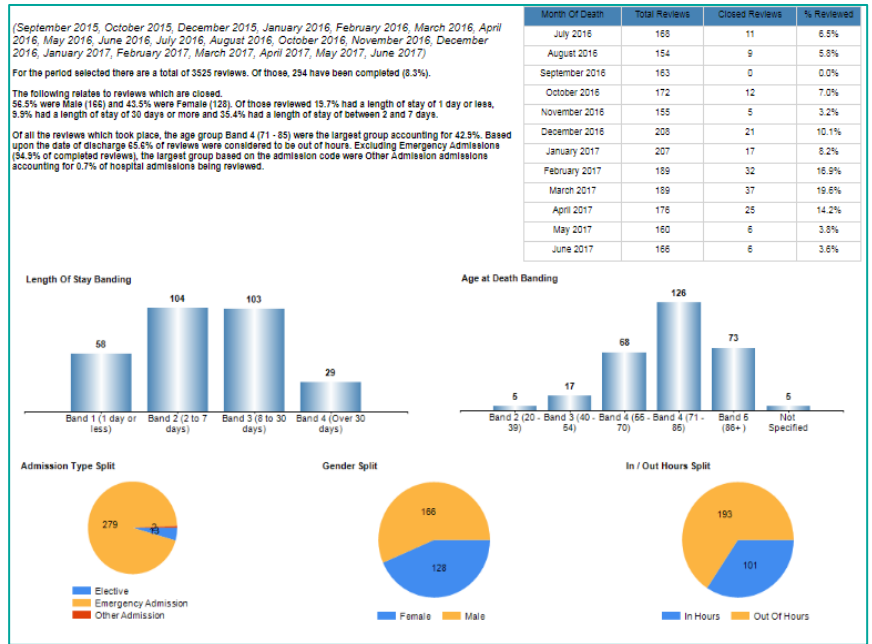

In-built reporting function

Bespoke review forms

No limit on number of review types, add specialty reviews to target areas of concern

Within system messaging, no need for information to transfer out of the system

Escalate cases for further review

- Within system reporting allows quick access to trust performance information
- Reports provide aggregate information and patient summaries
- Target reviews at specific clinical conditions where your trust may be an outlier
- Streamline your process by identifying cases for full review and others for shorter more specific reviews

“Clarity’s retrospective case review tool provides the ability to share reviews more easily within the organisation and especially in due course beyond it, flexibility in terms of the forms and ease of reporting.”

Mr Tony Roberts (Deputy Director for Clinical Effectiveness, South Tees Hospitals NHS Foundation Trust)

“Although we are only just getting up and running with the Clarity retrospective case review system it is already showing benefits, this can only get better the more we use it.”

Janet Alderton (Head of Patient Safety, North Tees and Hartlepool Hospitals NHS Foundation Trust)
